

Create endpoint [Info](#)

Create the type of VPC endpoint that supports the service, service network or resource to which you want to connect.

Endpoint settings

Specify a name and select the type of endpoint.

Name tag - optional

Creates a tag with a key of 'Name' and a value that you specify. Tags help you find and manage your endpoint.

☒ **AWS services**
Connect to services provided by Amazon with an interface endpoint, or a Gateway endpoint.

☐ **PrivateLink Ready partner services**
Connect to SaaS services which have AWS Service Ready designation with an interface endpoint. Uses AWS PrivateLink.

☐ **AWS Marketplace services**
Connect to SaaS services that you have purchased through AWS Marketplace with an interface endpoint.

☐ **EC2 Instance Connect Endpoint**
An elastic network interface that allows you to connect to resources in a private subnet.

☐ **Resources**
Connect to resources like Amazon Relational Database Services (RDS) with a Resource endpoint. Uses AWS PrivateLink.

☐ **Service networks**
Connect to VPC Lattice service networks with a Service network endpoint. Uses AWS PrivateLink.

☐ **Endpoint services that use NLBs and GWLBs**
Find services shared with you by service name. Connect to a Network LoadBalancer (NLB) service with an interface endpoint or to a Gateway LoadBalancer (GWLB) service with a Gateway Load Balancer endpoint.

ⓘ When you use an endpoint, the source IP addresses from your instances in your affected subnets for accessing the AWS service in the same region will be private IP addresses, not public IP addresses. Existing connections from your affected subnets to the AWS service that use public IP addresses may be dropped. Ensure that you don't have critical tasks running when you create or modify an endpoint.

Policy [Info](#)

VPC endpoint policy controls access to the service.

Full access

Allow access by any user or service within the VPC using credentials from any Amazon Web Services accounts to any resources in this Amazon Web Services service. All policies — IAM user policies, VPC endpoint policies, and Amazon Web Services service-specific policies (e.g. Amazon S3 bucket policies, any S3 ACL policies) — must grant the necessary permissions for access to succeed.

Custom

Use the [policy creation tool](#) to generate a policy, then paste the generated policy below.
