Managed Apache Flink

Apache Flink applications

Create streaming application

Create streaming application

Info

Managed Service for Apache Flink continuously reads and analyzes data from a connected streaming source in real time. Managed Service for Apache Flink resources are not covered under the AWS Free Tier, and usage-based charges apply. For more information, see [Managed Service for Apache Flink pricing](#).

Choose a method to setup the stream processing application

☒ Create from scratch
Create and configure the required resources using a step-by-step process.

☐ Use a blueprint
Creates and sets up all the resources that you need to get started in a single step using AWS CloudFormation.

Apache Flink configuration

Apache Flink - Streaming application

Apache Flink is an open-source framework and distributed processing engine for stateful computations over unbounded and bounded data streams. Use this option to build streaming application using Apache Flink in Java, Scala, and Python. You can also build Java-based streaming applications using Apache Beam. Apache Beam is an open source, unified model and set of language-specific SDKs for defining and running data processing workflows.

Apache Flink version

Apache Flink 1.15

Application configuration

Application name

AnomalyDetection

Acceptable characters are uppercase and lowercase letters, numbers, underscores, hyphens, and periods.

Description - optional

Enter description

Access to application resources

Create or choose IAM role with the required permissions. [Learn more](#)

☐ Create / update IAM role **kinesis-analytics-AnomalyDetection-us-east-1** with required policies

☒ Choose from IAM roles that Managed Service for Apache Flink can assume

Service role

lab-apache-flink-role-1fb8d000

View lab-apache-flink-role-1fb8d000 in IAM

Create

Automatic system rollback - new

Info

The service performs a rollback to the previous running version of the application as soon as it detects an error. Managed Service for Apache Flink continues to process data and maintains high availability for you applications. [Learn more](#)

☒ Turn on system rollback

Encryption - new

Info

Choose the data encryption you want to use. Data management requires encryption.

Info

Incompatible Flink version

Encryption is only available for Flink versions 1.20 and higher. Change the application version to 1.20 or higher to enable encryption.

Tags - optional

A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs. [Learn more](#)

No tags associated with this application.

Add tag

You can add up to 50 tags.

Template for application settings

Choose a sample template to meet your use case. All settings can be edited after creating the application.

Templates

☒ Development
Use these settings for lowest cost.

☐ Production
Use these settings for high availability and fast, consistent performance.

Development template

Setting	Value
Snapshots	Off
Logging with Amazon CloudWatch Logs	INFO
Monitoring metrics level with Amazon CloudWatch	Application
Parallelism	1
Parallelism per KPU	1
Automatic scaling	On
