Amazon Kinesis > Data streams > Create data stream

Create data stream

Info

Data stream configuration

Data stream name

WindDataStream

Acceptable characters are uppercase and lowercase letters, numbers, underscores, hyphens and periods.

Data stream capacity

Info

Capacity mode

☐ On-demand

Use this mode when your data stream's throughput requirements are unpredictable and variable. With on-demand mode, your data stream's capacity scales automatically. You can proactively scale the data stream's capacity by specifying warm throughput.

☒ Provisioned

Use provisioned mode when you can reliably estimate throughput requirements of your data stream. With provisioned mode, your data stream's capacity is fixed.

Provisioned shards

The total capacity of a stream is the sum of the capacities of its shards. Enter number of provisioned shards to see total data stream capacity.

1

Shard estimator

Minimum: 1, Maximum available: 20000, Account quota limit: 20000. [Request shard quota increase](#)

Total data stream capacity

Shard capacity is determined by the number of provisioned shards. Each shard ingests up to 1 MiB/second and 1,000 records/second and emits up to 2 MiB/second. If writes and reads exceed capacity, the application will receive throttles.

Write capacity

Maximum

1 MiB/second and 1,000 records/second

Read capacity

Maximum

2 MiB/second

Provisioned mode has a fixed-throughput pricing model. See [Kinesis pricing for Provisioned mode](#).

Maximum record size

Info

You can configure the maximum record size for data ingestion into your stream. The size cannot exceed 10240 KiB per record.

Maximum record size

1024

KiB

Value must be between 1024-10240

This setting only adjusts the maximum record size for this Kinesis data stream. Before increasing this limit, verify that all downstream applications can handle larger records.

Data stream settings

You can edit the settings after the data stream has been created and is in the active status.

Setting	Value	Editable after creation
Capacity mode	Provisioned	Yes
Provisioned shards	1	Yes
Data retention period	1 day	Yes
Server-side encryption	Disabled	Yes
Monitoring enhanced metrics	Disabled	Yes
Data stream sharing policy	No policy	Yes
Maximum record size	1024 KiB	Yes

Tags - optional

Info

You can add tags to organize your AWS resources, track costs, and control access.

No tags associated with the Kinesis Data Stream.

Add new tag

You can add up to 50 more tags.
